

# Materialanlieferung vom Media Composer an Studio Mitte

## AAF

Nuendo kann aus dem MXF Format keine Meta Daten ablesen. Deswegen muss darauf geachtet werden im AAF Export auf „**Convert Audio File Format to: WAVE (OMF)**“, anzuklicken und auszuwählen.

The screenshot shows the AAF Export dialog box in Nuendo. The 'Export As:' dropdown is set to 'AAF'. The 'AAF Edit Protocol' checkbox is checked. The 'Include Inactive Audio Tracks' checkbox is checked. The 'Convert Audio File Format to:' dropdown is set to 'WAVE (OMF)'. The 'Export Method:' dropdown is set to 'Copy All Media'. The 'Include Master Fader in Mixdown' checkbox is checked. The 'Audio' dropdown is set to 'Folder'. The 'Use Same Folder As AAF File' checkbox is checked. The 'Save As...' button is highlighted.

Export As:  ☐ Use Marks  
☒ AAF Edit Protocol ☐ Use Selected Tracks  
☐ Pro Tools 10/12 compatibility ☒ Include Inactive Audio Tracks  
☐ Enable Mask Margins

☐ Include All Video / Data Tracks in Sequence  
☒ Include Audio Tracks in Sequence

Audio Details
